DETAILED ACTION

Restriction/Election

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1-20, drawn to display image, classified in class 345, subclass 87
 - II. Claims 21-31, drawn to active matrix LCD, classified in class 345, subclass 92.
 - III. Claims 32-48, drawn to microdisplay system with memory elements, classified in class 521, subclass 212.
 - IV. Claims 49-56, drawn to analog video system with synch signal separating filter, classified in class 211, subclass 12.
 - V. Claims 57-64, drawn to analog video system with image sensor, classified in class 382, subclass 121.
 - VI. Claims 65-67, drawn to a digital camera, classified in class 348, subclass 211.
 - VII. Claims 68-70, drawn to a portable communication system comprising a cellular telephone classified in class 379, subclass 184.
 - VIII. Claims 71-78, drawn to a digital printer with LCD and backlight, classified in class 358.
 - IX. Claims 79-84, drawn to an instant camera with LED illuminating LCD, classified in class 345, subclass 102.
 - X. Claim 85, drawn to a method of producing a color print, classified in class 358, subclass 134.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, IV, V, VI, VII, VIII, IX and X are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a displaying image (of group I) does not require the active matrix LCD (of group II), the microdisplay system with memory elements (of group III), the analog video system with synch signal separating filter (of group IV), an analog video system with image sensor (of group V), an digital camera (of group VI), a portable communication system with cellulartelephone (of group VII), a digital printer with LCD and backlight (of group VIII), an instant camera with LED illuminating LCD, and a method of producing an print (of group X). The subcombination has separate utility such as an active matrix LCD having an array of transistor circuits formed in a first plane, each transistor circuit being connected to a pixel electrode in an array of pixel electrodes.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Moreover, the search required for group II is not required for groups I, III, IV, V, VI, VII, VIII, IX, X. The search required for group III is not required for groups I, II, IV, V, VI, VII, VIII, IX, X. The search required for group IV is not required for groups I, II, III, V, VI, VII, VIII, IX, X. The search required for group V is not required for groups I, II, III, IV, VI, VII,

Art Unit: 2674

VIII, IX, X. The search required for group VI is not required for groups I, II, III, IV, V, VII, VIII, IX, X. The search required for group VII is not required for groups I, II, III, IV, V, VI, VIII, IX, X. The search required for group VIII is not required for groups I, II, III, IV, V, VI, VII, VIII, IX, X. The search required for group IX is not required for groups I, II, III, IV, V, VI, VII, VIII, X. The search required for group X is not required for groups I, II, III, IV, V, VI, VII, VIII, IX. Therefore, restriction for examination purposes as indicated is proper.

3. A telephone call was made to Raymond I. Bruttmesso, Jr. on 2/28/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.
